Introduction

Welcome to the June 2005 issue of the DRC Disability Briefing. Section one of this edition contains an analysis of disabled people's participation in the labour market using Autumn 2004 LFS data, and thus updates the core tables presented in the December Briefing. The time series data will be updated and expanded in the next issue, once the spring 2005 LFS data is released.

Section two of the current issue has not been updated, as we have not received any recent estimates of the disabled population from the Family Resources Survey (FRS).

Section three 'DRC Research projects update' provides a brief overview of recently published DRC research, plus details of how to obtain the full report.

If you have any comments or queries on the content of this current edition or suggestions for future Briefings, please contact Breda Twomey at the DRC by email:
Breda.Twomey@drc-gb.org

The next DRC Disability Briefing will be published in December 2005.

Definitions of disability used in the LFS

Since spring 1997, the LFS has provided information about disability using the following range of definitions:

Current DDA disabled: Includes people who have a long term health problem or disability which has a substantial and long-term adverse effect on their ability to carry out normal day to day activities.

Work limiting disabled: Includes people who have a long-term health problem or disability which affects the kind or amount of paid work which a person might do.

Long term disabled: Includes people who meet the criteria for either current DDA or work-limiting definitions of disability (or both – as is often the case) are defined as having a current long-term disability.

Clearly, estimates for the different definitions may vary, and it should be noted that the difference between the DDA definition estimates and those based on work-limiting disabilities may be exaggerated due to people not being able to assess the extent to which their work limiting disability would also affect their ability to carry out normal day to day activities. It follows that including all those with current long term disabilities improves the accuracy and comprehensiveness of the estimates.

Please note that throughout this briefing, people who are ‘long term disabled’ will be referred to as ‘All disabled’, unless otherwise specified.

Further information on the disability questions in the LFS is included in the *Technical Note* at the end of this briefing.

Some Key Facts and Figures

Analysis from the Autumn 2004 LFS indicates that:

- There are 6.8 million disabled people of working age in Britain, one fifth of the total working age population. Fifty two per cent (3.5 million) are men and forty eight per cent (3.3 million) are women.
- Across Britain there are regional variations in the prevalence of disability. The North East of England and Wales have the highest proportions of disabled people, with about one quarter of the working age population in these regions disabled – 26 per cent and 24 per cent respectively. London and the South East have lower than average proportions of disabled people at 17 per cent.
- Disability rates increase with age; whilst 9 per cent of adults aged 16-24 are disabled, this increases to over 40 per cent for the 50 to retirement age group.
- In Autumn 2004, the overall employment rate for disabled people in Britain was 51 per cent, compared with 81 per cent for non disabled people.
- Employment rates vary greatly according to the type of impairment a person has. Disabled people with mental health problems have the lowest employment rates of all impairment categories, at only 21 per cent. For people with learning difficulties, the employment rate is 26 per cent.
- The unemployment rate for disabled people is near twice that for non disabled people, 7 per cent compared with 4 per cent.
- Disabled people are three times more likely to be economically inactive as non disabled people, 45 per cent compared with 15 per cent. However, over one third of inactive disabled people said they would like to work.

- Disabled people in employment are more likely to work in manual and lower occupations, and less likely to work in managerial, professional and high-skilled occupations.
- At £9.52 per hour, the average gross hourly pay of disabled employees is about 10 per cent less than that of non disabled employees (£10.43 per hour).
- Disabled people are still only half as likely as non disabled people to be qualified to degree level and are twice as likely as non disabled people to have no qualification at all.

Section 1: Autumn 2004 LFS Data

Table 1: Economic status of disabled people in Britain

Great Britain, autumn 2004, LFS, not seasonally adjusted.

(Thousands, per cent, £)

Section 2: Recent disability estimates from the Family Resources Survey (FRS)

We have received no further FRS disability estimates since the data included in section two of the DRC Disability Briefing December 2004

<http://www.drc.org.uk/publicationsandreports/research.asp>. As soon as we receive further updates we will publish them in the Disability Briefing.

Section 3: DRC Research Project Update

The following section presents an overview of DRC research completed since January 2005. It starts with the most recently completed research.

Recently Completed DRC Research

NEW Literature review on curriculum and qualification design

Published in June 2005

A GB-wide review of the literature was undertaken in 2004/05 by the Institute of Education for the Disability Rights Commission (DRC) in order to review and gather evidence on the impact of systems, policies and practices of the curriculum, its assessment and examinations on disabled learners. The aim of the review was to determine how effective the current curriculum and examination system is at developing, identifying and consolidating the competencies, skills and knowledge of disabled learners; to research the effectiveness of other curriculum and examination systems; and to identify the key contributing factors of effective systems, including examples of policy and practice internationally.

The DRC has also produced a summary paper to accompany the research report, which includes the key findings and a series of recommendations.

Both the full report and the summary can be viewed and downloaded from the DRC website at

<http://www.drc.org.uk/publicationsandreports/research.asp>

NEW Research study on the experiences of disabled pupils and students and their parents/carers

Published June 2005

Phase One of this research, undertaken in 2004/05 was a qualitative, exploratory study on the views and experiences of disabled pupils and students and their families in Great Britain. The full report can be viewed and downloaded from the DRC website at

<http://www.drc.org.uk/publicationsandreports/research.asp>.

A summary of this research will shortly be published on the DRC website.

Phase Two should start in June 2005 and be completed by Summer 2006. This project will build on Phase One, as well as previous DRC and other research, and will aim to provide evidence of key issues for young disabled people and their parents and carers in relation to the perceived impact of the DDA Part 4 duties and to education provision generally.

Technical Note

The Labour Force Survey Questions on Disability

The focus of and number of questions in the health and disability module of the LFS changed in the spring 1997 to reflect the provisions of the Disability Discrimination Act 1995 (DDA). Since spring 1997 all working age LFS respondents have been asked:

- Do you have any health problems or disabilities that you expect will last more than a year?
If they answer 'yes' to this question, they are also asked to say what kind(s) of health problem or disability(ies) they have, based on a list read to them by the interviewer.

If they then answer '**yes**' to the following question:

- Does this (do these) health problem(s) or disability(ies) (when taken singly or together) substantially limit your ability to carry out normal day to day activities?

OR

- They said that they had the following health problems: progressive illnesses not included elsewhere (e.g. cancer, multiple sclerosis, symptomatic HIV, Parkinson's disease, muscular dystrophy)

Then they are defined as having a **current DDA disability**.

People whose health problem(s) or disability(ies) are expected to last more than a year are also asked the following questions:

- 'Does this health problem affect the KIND of work that you might do?'
- '..... or the AMOUNT of paid work you might do?'

If the respondent fulfils either of these criteria they are defined as having a **work-limiting disability**.

Those people who meet the criteria for either current DDA or work-limiting definitions of disability (or both – as is usually the case) are defined as having a **current long-term disability**.
